

# Meeting Week 2: Algorithms for String Matching with Gaps

S. Tudent      T. Hesis

## **What has been done this week**

I have been working on understanding the algorithm from the paper by Morgante et al and describing it in my own words for the thesis.

## **Project status according to the project plan**

According to the plan, I should have finished reading the paper this week, but I have a problem understanding the proof in section 3.4.

## **Plan for the next weeks**

- Finish writing about the algorithm from the paper.
- Design test cases for empirical tests.

## **Meeting this week**

- I would like to discuss the proof in section 3.4 of Morgante et al.'s paper. I don't understand the second part of the induction case.
